Evaluation of data quality

- **Accuracy and Credibility:** The data is assumed accurate as it comes from a reliable source, Washington State Department of Licensing (DOL). While I'm not an expert on the specific topic, the credibility of DOL as a source suggests that the data is trustworthy.
- **Completeness:** The dataset appears to be complete, with no missing values in crucial fields, indicating that it contains all necessary information, and it is as complete as possible in reality.
- **Consistency:** Since I am working with a single dataset, there are no inconsistencies within the data itself, making it consistent.
- **Timeliness:** The dataset is regularly updated, with the latest update being on September 20, 2024. This makes the data timely, as it reflects recent information.
- **Currency:** The dataset is the most recent version available, making it current and relevant.

Overall, the data is of high quality, suitable for analysis and visualization purposes.
